

Velveting Nut

Quality feed formulated to maximise the stags' potential antler and velvet growth.

Feeding Guidelines

Starch, Protein and ME are all vital ingredients to maintain and increase growth rates of animals but rapidly degradable starch can cause acidosis, so it is vital to introduce the nut slowly until the desired feed rate has been reached (Red Stag up to 2kg per day & Waipiti Bull up to 3kg per day). It is suggested to start three weeks before button drop and continuing through until velvet is cut or until trophy growth is reached. In paddock feeders can be used to control intake or trailed through a standard grain feeder.

Specifications

Minimum Starch Content: 40%
Minimum ME: 13.6 %

Minimum Protein: 19%
Minimum NDF: 17%

GMO Free

Acidosis

Sodium Bicarbonate is included to help manage and buffer gut pH and Levecell SC has been proven to reduce acidosis risk and improve growth rates.

Description & Ingredients

A 10mm in diameter Nut, 1.5 – 2cm in length. Manufactured from Wheat, Barley, Broll, Dried Distillers Grains, Soya Bean Meal (Non GMO formula replaced with Peas), Ryegrass Fibre, Molasses, Mycotoxin Binder, Sodium Bicarbonate, Levecell SC, Sweetener and a full specific Trace Element pack for deer.

Best practice would be to ensure a good supply of fibre / roughage is also available.

Available in a GMO free formulation in accordance with the *Cervena*[®] Standard. *Cervena*[®] is the registered trademark of the Cervena Trust.
