

# Weaner/Yearling Growth Nut

*Quality feed formulated to maintain and maximise growth rates of young stock.*

## Feeding Guidelines

Starch, Protein and ME are all vital ingredients to maintain and increase growth rates of young animals but rapidly degradable starch can cause acidosis, so it is vital to introduce the nut slowly until the desired feed rate has been reached (0.50kg to 0.75kg per animal per day). The nut is recommended to be feed in winter and early spring. In paddock feeders can be used to control intake or trailed through a typical grain feeder.

## Acidosis

Sodium Bicarbonate is included to help manage and buffer gut pH and Levecell SC has been proven to reduce acidosis risk and improve growth rates, when presented with rapidly degradable starch.

## Specifications

**Minimum Starch Content: 38%**  
**Minimum ME: 12.5 %**

**Minimum Protein: 18%**  
**Minimum NDF: 19%**

**GMO  
Free**

## Description & Ingredients

A 10mm in diameter nut, 1.5 – 2cm in length. Manufactured from Wheat, Barley, PKE, Broll, Soya Bean Meal (Non GMO formula replaced with Peas), Molasses, Sodium Bicarbonate, Levecell SC, Sweetener and a full specific Trace Element pack for deer.

Best practice would be to ensure a good supply of fibre / roughage is also available.

(Starch, Protein, ME and Trace Elements vary depending on the class, size and weight of the animals)

Available in a GMO free formulation in accordance with the *Cervena® Standard*. Cervena® is the registered trademark of the Cervena Trust.
